What happens to the items that we collect?

Each item is reviewed for potential reuse and refurbishing - about 20 % to 30% can be reused. Other items are broken down at our facility for parts and materials (pc's, printers, appliances, etc.) We recover steel, aluminum, copper, glass, plastics and other raw materials that are further processed with specialty recycling companies.

Why are there recycling fees for some items?

Some equipment cannot be refurbished for continued use and contain hazardous materials. These items require special processing to remove toxins before the other materials can be recycled.

We help you protect the environment...

by keeping electronic waste materials out of landfills and putting them back into the manufacturing process to make new products

We recycle much more
